SUMMARY

Fourth-year Computer Science student at ICTU, working in AI and software. Exposure to computer vision, natural language processing and backend development. Top 5 at Phenikaa AI Hackathon 2026, intern at Viettel Software, Consolation Prize at the National Student Informatics Olympiad 2025. Aiming for an AI or software internship, to work on real products.

EDUCATION

Computer Science — Fourth-year Student (Expected 2027) **Sep 2023 — Present**

Thai Nguyen University of Information and Communication Technology (ICTU)

- **Current GPA:** 3.45 / 4.00
- **Awards:** Consolation Prize — National Olympiad in Informatics (OLP) 2025, Informatics track, certificate p. 59 ***Results***
- Top 5 — Phenikaa AI Hackathon 2026 ***Results***
- Second Prize — ICTU OJ Challenge

PROJECTS

Phenikaa Campus Courier 2026 — Multimodal Delivery AI **Oct 2026**

Phenikaa AI Hackathon 2026, Team Devil May Cry ***Details***

A system that reads a campus map and a noisy Vietnamese instruction to predict the moves of delivery robots. I built the qualifier solution on my own, with AI coding assistance; the team finished 5th of 11 in the final.

Vietnamese Address Normalization to the New Administrative Units after the 2025 Merger **Oct 2026 — Nov 2026**

NLP project ***Details***

An offline system, with no LLM or external API, that converts free-form Vietnamese addresses to the administrative units in effect after the 2025 merger (34 provinces). 86.8% full-address accuracy on a dev set of real addresses.

Unsupervised Anomaly Detection and Localization on Industrial Products **Oct 2026**

Team project · Computer vision ***Details***

A comparison of three unsupervised methods (Autoencoder, PaDiM, PatchCore) that find and locate defects in industrial product images, trained only on defect-free images. My part: the Autoencoder, the demo and PatchCore experiments; PatchCore was best (mean image-AUROC 0.937).

EXPERIENCE

Backend Training Program — Viettel Software **Jul 2026 — Oct 2026**

Intern. Capstone: Personal Finance Management System with an integrated AI agent ***Details***

A personal finance web app (TypeScript, Express, Prisma, PostgreSQL) with an AI agent that helps manage transactions, budgets and bills; every change the agent proposes needs the user's confirmation.

Samsung Innovation Campus (SIC) — Artificial Intelligence Program **Jun 2025 — Aug 2025**

Capstone: Vietnam Traffic Sign Detection (team of 3) ***Details***

Vietnamese traffic sign detection with YOLOv8. My part: training and tuning the model and writing the prediction pipeline.

ADDITIONAL INFORMATION

- **Programming:** Python, C++ (Competitive Programming), TypeScript, SQL (PostgreSQL, MySQL)
- **AI/ML:** PyTorch, scikit-learn, LightGBM, OpenCV, NumPy, MediaPipe, YOLOv8, Vietnamese NLP
- **Backend & Tools:** Express, Prisma, REST APIs, Docker, Git, Vitest, Playwright, Jupyter Notebook, Roboflow
- **Languages:** English (Pre-intermediate)
- **Certifications:** Samsung Innovation Campus (SIC) - Artificial Intelligence, Viettel Software Internship Program (2026)
